Claims 1-23 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 11/16/2007.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 24-52 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. It is unclear how during the performance of the method the impedance is correlated to the pressure. Specifically, it is unclear if it means the impedance represents pressure or if some conversion is performed to transform the impedance to pressure. It is unclear how intracardiac impedance is correlated to left ventricular ejection fraction and then how the ejection fraction corresponds to the different phases of the Valsalva maneuver.

Claims 24-52 define over the art of record in that none of the art correlates intracardiac impedance measurements with pressure measures relative to the performance of a pressure maneuver and evaluates the result against a trend for different phases of the maneuver to represent cardiac performance.
